

What's New

nworks MP for VMware 5.0

The nworks MP for VMware version 5.0 updates Veeam's leading-edge integration for distributed VMware Infrastructure monitoring and management for Microsoft Operations Manager 2005.

Responding to customer feedback and continuing to work closely with VMware, version 5.0 includes the following enhancements while maintaining VMware VI3 backward compatibility:

New in version 5.0:

- VMware vSphere 4 support
- Centralised management
- High availability
- Load balancing

Support for VMware vSphere - vCenter v4.0 and ESX v4.0

nworks MP v5 has full native support for vSphere VI-API v4.0, with many new performance and event Rules. VMware Ready Optimized certification means you stay future-proofed and are able to monitor all vSphere features with full confidence from MOM 2005.

• vSphere feature support

Full VMware vSphere feature support with preconfigured monitoring of –

- Distributed Power Management
- Host Profiles
- Virtual Applications
- VM Fault-Tolerance

nworks Enterprise Manager

The nworks Enterprise Manager, a web-based nworks Collector administration interface directly accessible from the MOM console, provides centralized configuration of a group of nworks Collectors. The nworks Enterprise Manager means lower administration overhead, simplified deployment and configuration, and high availability monitoring.

• High-Availability.

The nworks Enterprise Manager, leveraging its centralized license and configuration capabilities, provides high-availability through "Hot-Standby" nworks Collectors. An nworks Collector 'heartbeat' failure triggers redistribution of the failed nworks Collector's management jobs to standby nworks Collectors.

• Load-Balancing.

Deployment and configuration tasks are further automated through the load-balancing feature of the nworks Enterprise Manager. In multiple nworks Collectors implementations, monitoring Jobs are automatically assigned using the Balance feature, eliminating individual nworks Collector configuration.

• License Server.

Centralised management for licensing across multiple nworks Collector servers is included in the nworks Enterprise Manager, greatly simplifying deployment tasks and ongoing management overhead for dynamically growing environments. The License Server manages a single pool of licenses across all nworks Collectors, automatically distributing licenses as required.
