Veeam Availability Solution for Cisco UCS

The data availability challenge

Organizations are modernizing their data centers so that they can provision IT services faster, strengthen security and control, and lower operating costs. While building modern data centers, organizations invest in server virtualization, modern storage applications, and cloud-based services. However, businesses are facing new demands from end users, including access to data and applications at all times with no downtime or data loss. In addition, they are facing exponential data growth annually. For many organizations, there is a gap: between the requirements of the Hyper-Available Enterprise™ and IT’s ability to effectively deliver availability. Organizations bridge this gap with a new kind of solution — one that delivers a recovery time objective (RTO) and recovery point objective (RPO) of less than 15 minutes for all applications and data.

The Solution: Veeam Availability Solution for Cisco UCS

Veeam and Cisco have collaborated to offer an integrated and pre-configured data availability solution based on Cisco UCS and Veeam technology. The Veeam Availability Solution for Cisco UCS comes ready for deployment, and is verified jointly by Veeam and Cisco.

The Veeam Availability Solution for Cisco UCS offers:

- Data availability — instant VM recovery and file-level recovery.
- Verified protection — automatically verifies the recoverability of every backup and replica.
- Two-in-one backup and replication — provides near-continuous data protection for every virtualized application.
- Rapid restores for critical applications like Microsoft Exchange, SharePoint, SQL Server, and Oracle databases.
- Scalable and flexible — Ready to deploy and scales easily from 48TB and 70 VMs to over 2PB and thousands of VMs.

The Veeam Availability Solution for Cisco UCS is a solution that is simple to purchase, deploy, and manage. It is ideal for midsize, large, remote office/branch office (ROBO) customers and service providers.

The Veeam Availability Solution for Cisco UCS leverages Cisco UCS M240 or S3260 storage servers and Veeam Availability Suite to deliver high-speed recovery, data loss avoidance, and verified protection with complete visibility for applications requiring high availability and scalability.

“TMA’s vision is to improve the health of all Texans, so we use the time and money saved by Veeam and the S3260 to concentrate on ways technology can support our public health priorities, including reduced tobacco use, environmental hazards, obesity and mental health and substance use disorders,” Haley said.

Aaron Haley
Network Operations Director
Texas Medical Association

### Summary

The Veeam Availability Solution for Cisco UCS is a best-of-breed solution that is the perfect answer for customers requiring an advanced, enterprise-class data availability solution for their virtual environments that is simple to order, deploy and manage and can easily expand over time as the need increases.

It provides fast, flexible and reliable recovery of applications and data bringing backup and replication together in a single solution with award-winning support.
