

# Veeam and Everpure: Cyber Resilience Delivered as a Service Solution Brief

## Strategic Partnership Overview

Everpure + Veeam have formed a strategic alliance, integrating Veeam's advanced data protection software with Everpure's FlashArray and FlashBlade storage platforms. This collaboration delivers high-performance, immutable, and scalable data protection solutions that are available both on-premises and as managed or consumption-based services. This innovative solution is currently available through GSI and managed service providers (MSPs) with an active Veeam Cloud & Service Provider (VCSP) contract to offer maximum flexibility and value through a tailored, month-to-month service model.

## Supported Platforms and Environments

The integrated solution supports a wide range of production environments, including physical, unstructured, enterprise applications as well as virtual and multi-cloud platforms such as VMware and Hyper-V to provide a unified method for data protection.

## Performance Compared to Traditional Solutions

Everpure's all-flash storage delivers up to 20x greater reliability, faster backup windows, and near-instant recovery compared to legacy disk-based solutions.

## Key Benefits of Cyber Resilience Delivered as a Service

- **End-to-end immutability:** Protects data from ransomware and unauthorized changes using Everpure SafeMode Snapshots and Veeam's hardened repository features.
- **Fast backup and recovery:** Accelerates backup and restore processes through Veeam's orchestration of Everpure snapshots.
- **Lower total cost of ownership (TCO):** Reduces operational costs with efficient storage utilization and an evergreen subscription model.
- **Simplicity:** Offers streamlined management, simplified deployment, and seamless integration of software and hardware components.

## Ransomware Protection

- **Immutable snapshots:** Everpure's SafeMode Snapshots ensure data, both backup and production, is unchangeable, to defend against ransomware and accidental deletions.
- **Multi-layered security:** Veeam integrates with Everpure's S3 Object Lock and Retention Lock features and supports encryption in transit and at rest for robust data security.

## Technical Integration

The Veeam Data Platform integration with Everpure FlashArray enables businesses to automate, orchestrate, and protect their data using fast, application-consistent storage snapshots. This minimizes production impact, accelerates backup and recovery, and strengthens ransomware resilience with the help of immutable SafeMode snapshots. Backup data and retention can be stored on either FlashArray with rapid recovery directly from immutable snapshots or on FlashBlade with immutability and indelibility. Integration is facilitated via the free Everpure plug-in for Veeam Data Platform.

## Licensing and Commercial Models

- Veeam offers universal licensing for versatile deployment.
- Everpure provides evergreen subscriptions for storage-as-a-service.
- MSPs and GSIs can use Veeam's VCSP program for pay-as-you-go offerings.

## Solution Validation and Support

This solution is validated through the Veeam Ready program, ensuring full compatibility and joint support from both Everpure + Veeam.

## Environmental Impact

Everpure platforms feature exceptional energy efficiency, with up to 85% less e-waste, 20% lower energy consumption, and a reduced data center footprint compared to traditional storage solutions.

## Coordinated Support

Joint customers receive coordinated support from both Everpure + Veeam. Managed service customers may have support handled directly by their service provider, with escalation available through both vendors.
