

Veeam Intelligent Resops for Microsoft 365

Get Your Data Ready for AI, Audits, and Incidents.

Powered by Contextual Intelligence & Controls

Why this matters

As a VDC Microsoft 365 customer, your data is backed up: SharePoint, OneDrive, Exchange, and Teams, all protected, immutable, and ransomware resilient. That's what's working. But plenty isn't: you can't confirm your most critical data is protected, compliance is a constant worry, data storage costs keep climbing, and managing it all is a manual grind.

It traces back to one gap: missing data context. Simple questions from the business take weeks of digging to answer: Is our business-critical data backed up? Are we compliant with data retention laws? Where does our sensitive and regulated data live? How much is ROT (redundant, obsolete, trivial) data costing us?

Why now

Accelerating AI is the most critical priority for companies today. It's how you serve customers and make your people more productive. Yet AI adoption is stalling, and the root cause is data. No one can say what Copilot and agents can access, whether permissions are configured correctly, or what sensitive data they'll expose. Projects sit in risk review and the business waits.

Meanwhile, the threat is evolving. For years it was disasters and system failures. Then ransomware and breaches. Now it's your own AI agents accidentally deleting or modifying your data at machine speed. Getting AI right demands both: data that's ready, so adoption moves fast, and resilience against agentic threats and mistakes.

Key Differentiators

Superior DataAI Intelligence

Get full context around Microsoft 365 Data and AI assets using DataAI Command Graph.

Reliable Data Classification

Discover and classify wide variety of data and file formats with high efficacy.

Unmatched DataAI Resilience

Only platform with intelligence across production and backup data to help recover from AI agent mistakes

Veeam Intelligent ResOps for Microsoft 365

Veeam Intelligent ResOps is an add-on for VDC Microsoft 365 that gets your data ready for AI, audits, and incidents by bringing contextual intelligence and controls. The DataAI Command Graph powers it all, giving you the clarity to act. You minimize compliance overhead. You accelerate AI safely. You reduce storage costs. You drive minimum viable recovery, fast. And built-in agents put the full context of your data and AI at your team’s fingertips, so IT stops digging and starts accelerating the business.

Resilience is what makes AI trustworthy. Agents can act on your data, accidentally or maliciously, changing or deleting it at machine speed. And you can’t trust AI when you’re not in control. Veeam Intelligent ResOps changes that: you see exactly what an agent did, file by file, and restore those files precisely. Enable AI with confidence, knowing you can always recover.

The outcome: Get your data ready for AI, audits, and incidents. faster, and adopting AI with confidence.

Business Outcomes

Minimize Compliance Overhead

Continuously discover, classify, and label sensitive data and perform automated compliance checks to assess a variety of compliance requirements at once, cutting the manual work when audit season hits.

Accelerate AI Safely

Discover Copilot and the AI agents in your environment, govern what data they can reach, and close oversharing gaps before exposure. When an agent makes a mistake, see which files it modified or deleted and restore them precisely.

Reduce Storage Costs

Find redundant, obsolete, and trivial data across your M365 environment and quarantine it while you decide what to archive or delete with full context. Stop paying to store and protecting what the business does not need.

Drive Minimum Viable Recovery

Ensure business-critical data is backed up and close data protection gaps before an incident. When one hits, recover the data the business needs first, restoring the minimum viable business fast.

The Shift: From Guesswork to Intelligence

	Without iResOps	With iResOps
Compliance Controls	No visibility into sensitive, regulated data	Compliance evidence based on regulated data intelligence
AI Adoption	No visibility into what agents can reach or change	Agents governed at file level and mistakes can be reversed
Storage Costs	ROT data exponentially inflates storage costs	ROT identified and quarantined before it drives up costs
Recovery Speed	No proof critical data is backed	Critical data are backed up and prioritized for recovery first

About Veeam Software

Veeam®, the Data and AI Trust Company, helps organizations ensure their data and AI are understood, secured, and resilient — enabling the acceleration of safe AI at scale. Headquartered in Seattle with offices in more than 30 countries, Veeam protects over 550,000 customers worldwide, including 82% of the Fortune 500, who trust Veeam to keep their businesses running. Learn more at www.veeam.com or follow Veeam on LinkedIn @veeam-software and X @veeam.
