FREE Veeam Service Provider Console

Easily scale a Veeam-powered BaaS and DRaaS business

**Challenge**
With organizations quickly turning to cloud and managed service providers for their backup and disaster recovery (DR) needs, service providers need a flexible, centralized web-based user interface that makes it easy to scale their Veeam-powered managed backup business, optimize resources and boost revenue.

**Key capabilities**

- **Remote monitoring and management**
  Complete visibility and management of all your customer’s cloud, physical and virtual workloads from a single web-based UI.

- **Customer onboarding and billing**
  Simplified onboarding and integral billing options through APIs or seamless integration into ConnectWise.

- **Multi-tenancy**
  Scale your Veeam-powered business from a central location and be confident that all your customer’s data is secure and separated.

- **License and usage reporting**
  Accelerate productivity with streamlined, integrated license provisioning and in-depth reporting.

- **APIs and third-party integrations**
  Integrate Veeam Service Provider Console data into existing workflows with robust native APIs and third-party plug-ins.

- **Self-service portals**
  Increase efficiency for your customers and reseller partners with powerful self-service portals.
Veeam outpaces market growth by 8X (25.3% vs 2.9%)

“Veeam Service Provider Console allows us to centralize the management of all our Veeam Backup & Replication™ workloads, monitor executions and be able to quickly relaunch failed jobs, allowing us to be faster and more proactive.”

— Petru Craciunas,
Director of Architecture & Innovation, ADISTA
